Trees to be inventoried in the City of San Bruno

At their June 8th meeting, the City of San Bruno's City Council approved a contract with West Coast Arborists (WCA) to have the City's urban forest inventoried. The inventory will include all street trees, trees in open space areas, trees on City properties and potential street tree planting sites. Representatives from WCA, wearing identifiable uniforms, will be walking through the City between June 14th and July 1st collecting data on approximately 6,500 trees. All of the funds for the project, \$18,000, are from an Association of Bay Area Governments grant.

The inventory process will consist of assessing all existing tree sites in City maintained areas and collecting their attributes. Each tree will be identified by its street address, species, diameter, height, condition, and maintenance requirements. Having an up-to-date tree inventory will help the City better determine the maintenance needs of each tree, improve the health of the urban forest, reduce liability, and promote tree planting throughout the community.

For more information, please contact Randy Schwartz, Community Services Director, at 650-616-7181.
